

Dear Mott MacDonald Hiring Team,

I am excited to apply for the Senior GIS Consultant position with Mott MacDonald's ENC Digital Delivery team in London. I have five years of experience using GIS and spatial analysis at city scale, along with an MSc in Urban Spatial Science from CASA UCL. This role appeals to me because it brings together geospatial innovation and problem-solving with major infrastructure delivery, which closely matches both my professional experience and my research interests.

While working at Derman Verbakel Architecture in Tel Aviv, I managed geo-computational workflows in QGIS and ArcGIS across fifteen concurrent projects, including a transportation masterplan for Eilat Municipality and a TOD regeneration plan for 3,000 units near a future metro station. My work involved handling large spatial datasets, creating automated workflows that improved office efficiency by 30%, presenting analysis results to planning committees and senior stakeholders, and collaborating with multidisciplinary teams under tight deadlines. I also trained colleagues and university students in GIS tools, which has prepared me well for the mentoring responsibilities in this role.

For my MSc dissertation, I worked with CACI Ltd through the GeoDS industry placement scheme to build a Python-based analytical pipeline using GeoPandas, scikit-learn, spatial autocorrelation, and pre-modelling diagnostics to model retail spending patterns across the UK. This gave me practical experience building reproducible, automated geospatial workflows and communicating technical findings to both commercial sponsors and academic supervisors, directly relevant to Mott MacDonald's client-focused delivery environment.

Before starting my MSc, I reflected carefully on where my strengths and interests could best combine and I imagined a role much like this one, where digital innovation meets infrastructure at scale. Being part of a global GIS community of over 700 specialists, and contributing my background in design intelligence, spatial analysis, and computational methods, is exactly the kind of environment where I believe I can grow and contribute something distinctive.

Thank you for considering my application.

Warm regards,

Emily Deeb
